

## **INSTRUCTIONS**

1. Copy Membership section from file sent to GCFA into the data tab.
2. Make sure that the data analysis tool pack has been inserted. If not then go to Tools --> Add-ins --> Check Analysis Tool pack.
3. Add the bins you want on the data tab. Just add the top number for each bin (i.e. bin 26 - 50 would just be recognized in excel as 50). Then go to Tools --> Data Analysis --> Histogram. Insert bin and array(data field) If column headers are selected then click the label box. Also select the Cumulative Percentage Box. You can use this to double check the manual entries made.
4. Sort the membership and then add a column to add the bin number you used to create the histogram bins. Manually insert and copy the bins all the way down the column.
5. Create a pivot table with Bins in the Column and
  - a. Count of Churches in the data filed. Use this pivot table to agree back to the histogram data tab. If both agree then the bins have been correctly added. If not investigate and fix differences.
  - b. Once # of churches agree then change the data field to sum of Membership.
6. Copy the Pivot table to Histogram data for # of Churches to the Journal Layout table. Then copy the sum of Membership by Bins from the Pivot table to the Journal Layout. Note when copying from a pivot table use Paste Special -->Values.
7. Gray Shades and Green text means the box is a formula and you do not need to update information. After footing numbers certain boxes will need to be updated so that all numbers correctly add. Those have no shading. After copying in information to the journal layout tab updated the date highlighted in yellow up to. The Journal Print tab is linked to the layout tab. All changes to the data need to be done on layout tab.
